[a] The figures for 1841, as published in *Gazette*, are full of errors which cannot now be corrected, and should therefore be used with great caution.

[b] The figures (Persons) for 1847 include 2246 military, women, and children; also 3731 male convicts on public work.

[c] „ „ 1851 „ 953 „ „ „ „ 568 convicts, sex not distinguished.

[d] „ „ 1857 „ 630 „ „ „

[e] The discrepancy in the number of brick and stone houses in 1870 and 1881 arises from a large number of residents in country districts failing to give definite descriptions.

[Compiled by Government Statistician from Returns supplied by the Customs Department.]

* The corresponding numbers to and from, as ascertained by the Customs Departments of the various Colonies, are so utterly irreconcilable that it has been deemed more desirable to take the departures as ascertained by our own Customs Department than to base the statement of migration upon the compilations prepared at Colonial and Foreign ports of arrival or departure. Owing, however, to the completely insular character of Tasmania as a Colony, conclusions drawn in respect of increase or decrease to population are less liable to error than similar conclusions drawn in respect of each Colony of Continental Australia. As regards migration seaward, it must be borne in mind that it is more than probable that the figures given independently by each Colony are equally and indefinitely erroneous within certain limits, and therefore it is unwise to assume that the differences shown between the statements of two Colonies afford any reliable index to either the extent or direction of the divergence from the truth.

† Estimated to be understated by about 7 per cent.

(a) It is impossible to give the exact Post Office Revenue, the same description of stamps being in most cases used for the purposes of the Post Office and of the Stamp Act.
(b) This amount embraces Fees and Contributions from other Countries not included in former years.
NOTE.—Of Local Letters, Packets, &c., only "Outwards" are taken into account, in order that the same letter may not be twice included.

* The maximum rate appears only to have prevailed in Districts chiefly Urban or Pastoral, where it may be supposed there was greater scarcity of agricultural labour. There is sometimes great difficulty in fixing the prevailing rate in Districts where few individuals of the particular class are employed.

[a] In making these calculations the following rule has generally been observed:—Fractions of a £ over 10*s.* have been regarded as £1, those under 10*s.* ignored.

[b] Distribution of the proportions charged against each item calculated on the basis of Unredeemed Loans. Specific Rates of Interest against particular works being affected by renewals are ignored: all items are consequently charged at the mean rate, and therefore the same item may show a diminished charge for Interest according as the mean rate of Interest is lowered.

[c] Includes expenditure in connection with Launceston Exhibition, £3000, and Expenditure in connection with Census, £3369 14*s.* 7*d.*

MEMO.—The Returns hitherto furnished of the Area of Crown Land under Rental have, for many years past,* shown a considerable excess beyond the actual quantity under lease. It is difficult now to account for the very great discrepancy; but it may have arisen, in some measure, from the fact that, *after* the annual Returns are made up, lists of persons who have failed to pay rent are received from the Treasury, and they have not been taken into consideration when the Returns for the following year have been prepared.

* Up to, and including, 1866.

With respect to the nominal decrease in Number of Leases in force and acreage, Mr. Belstead gives the following explanation :—Of the mineral and gold leases cancelled during the year 1885, a very large proportion, certainly 80 per cent., had been taken up whilst the scrip-broking mania was in progress, for purely speculative purposes, and in very few cases had any mining been done or attempted to be done upon the ground. Upon the subsidence of the excitement the rents were allowed to fall into arrear, and the leases were consequently forfeited. Much of the same ground is now being retaken up in smaller areas and worked.

* Only one of these claims working.

[There being no Statistical Staff connected with the Mining Department in Tasmania, as in the neighbouring Colonies, the figures have been kindly supplied by the Collectors of Agricultural Statistics. As some of the mines are only partially worked during the year, and many mining companies are unregistered, it is difficult to obtain anything approaching accurate information. Tin is worked alluvially and in lode, so that a correct division cannot be obtained. These figures must therefore be regarded as roughly approximate.]

TRADES, MANUFACTORIES, AND OTHER INDUSTRIES.

With regard to the following industries, the aggregates are alone given, as it would not be desirable to localise information to Districts, thereby in many cases unnecessarily disclosing the extent of the business of private individuals or companies, as the case may be.

Unfortunately, the figures given by some establishments in respect of capital invested vary greatly year by year; such figures can therefore be only regarded as rough approximates.

* The defined expenditure from Loans in New Zealand does not include items prior to year 1870 expended under Provincial Governments, and only includes the bulk of Loans expenditure since that period. A reference to the Total Public Debt, £38,844,914, indicates that a sum of £10,889,018 is not included in the specified statement.

* NOTE.—As the Loans actually expended on Railways on 31st December, 1891, include a considerable amount for Lines not open for traffic, the percentage proportion to capital will be somewhat less than what it would be if reckoned in relation to *Capital expended on Lines open for traffic* only. The net burden on General Revenue, however, is more correctly indicated by the method adopted.

Comparative Table contrasting the General Statistics of each Colony for the Year 1891.

Finance.—Table showing in greater detail for each Colony (absolute and relative) Gross and Net Revenue, 1891, 20; Gross and Net Expenditure, 1891, 22; Loans Expenditure for year 1891, and aggregate up to and including year 1891, 24. Distribution of Interest on Public Debt proportionally against the purposes for which the Debt was contracted on the basis of Loans Expenditure, 25.

Railways.—Statement showing the Financial aspect of the Government Railways of Australasia in relation to the Public Treasury of each Colony, 25.

External Trade.—Table showing the Ex-Australasian and Intercolonial Trade of each Colony since the year 1876, 26. General Summary showing Aggregate Trade of Australasia since year 1876, 28. Summary showing the Proportional Value of the Ex-Australasian and Intercolonial Trade at the close of the last Four Quinquennial Periods, 28.

Comparative Progress of the various Colonies.

Although much depends upon the wisdom and energy of men in framing wise laws and promoting industries, the developmental progress of young Colonies depends, in a greater measure than is generally acknowledged, upon the extent and the natural conditions of the lands open to colonising efforts.

The whole fabric of the earlier stages of a Colony depends mainly on the agricultural and pastoral industries; and successful enterprise in these, again, depends largely upon the natural facilities offered in the various lands open for selection to immigrants from other densely-populated centres. Among the principal factors which determine the progress of settlement in the earlier stages of a Colony's history are climate, suitability of soil for agricultural or pastoral pursuits, and nearness of producing centres to market or seaboard. At the beginning the first-class or more accessible areas attract the attention of settlers, but the rate of settlement in each Colony greatly diminishes as the poorer or less accessible areas are approached. Thus, in the earlier stages, the smaller areas open to settlers in Tasmania and Victoria show a much more rapid development, owing to their accessibility, more favourable climate, and richer soil attracting a larger proportion of the continuous stream of enterprising immigrants from European centres. The very much greater rate of settlement, however, is soon checked by the limited areas of the smaller Colonies, and the stream of immigration gradually diverges to the less favourable climate, and the second-class pastoral land of the larger Colonies, as in New South Wales and Queensland.

Broadly speaking, the development of a new Colony passes through three great successive predominating stages, partly overlapping—

(1.) The predominance of the Pastoral stage.

(2.) The predominance of the Agricultural stage.

(3.) The predominance of the Manufacturing stage.

The last of these stages is a long way off, so far as the Australasian Colonies are concerned, because density of population, involving a struggle for existence among the labouring classes, is essential to the establishment of great manufacturing industries which can successfully and independently compete with other countries in the external or open markets of the world; but pastoral and agricultural interests alone cannot support many persons to the square mile of territory, and hence, in young colonies, the rate of development, so far as population is concerned, is usually less rapid when all the available lands have been encroached upon, and when the manufacturing stage is approached. It must be confessed, however, that the relative progress of Victoria as compared with New South Wales (the former having developed much more rapidly than the latter), does not show, as yet, any great diminution in its rate of development, even although it has now arrived at a stage which shows a density of population per square mile of territory (13·05) three and a half times greater than that of the older or mother Colony.

It is utterly misleading, by means of aggregates, to discuss the relative development of Colonies whose areas vary in extent in the relative proportions of from 1–40; thus—

AREA Square Miles.

Tasmania.....	26,215, equivalent to	1	
Victoria.....	87,884 ,,	3⅓	nearly.
New Zealand.....	104,032 ,,	4	,,
New South Wales	310,700 ,,	12	,,
Queensland.....	668,497 ,,	25½	,,
South Australia	903,690 ,,	34	,,
Western Australia.....	1,060,000 ,,	40	,,

It is true the population of the Colony of New South Wales (which is nearly four times the size of Victoria) has slightly surpassed the population of Victoria at the close of 1891, but this does not afford any proof of a superior rate of development.

The only means whereby the rate of progress can be measured in Colonies whose aggregates are mainly increased by fresh areas brought under occupation, is by relation to total area, as in the following comparison :—

AUSTRALASIAN STATISTICS, 1891.

PROGRESS OF AUSTRALASIA.

THE tables of Australasian Statistics which follow these introductory observations on the Progress of Australasia have been carefully compiled from Returns furnished by the Governments of the various Colonies. The general tables for each Colony contain a large amount of information conveniently arranged for reference and comparison. Additional tables have also been added for the purpose of giving fuller information on the important matters relating to Finance, Public Debt, Railways, and External Trade. In the following observations various matters of more than ordinary importance are selected for the purpose of helping to clear away current misconceptions regarding the interpretation of the tables of figures which are more particularly related to them.

Progress of Australasia since 1830.

The following table has been specially prepared to show the general progress of Australasia over a longer period than that shown in the fuller tables restricted to recent years. The particulars selected are shown, as far as can be obtained, for the year closing each decade since the year 1830, and conveys a bird's-eye view of the rapid progress made over the sixty-one years ending with the year 1891. The Annual Rate of Progress since 1850 and during the last decade are given side by side to mark the varying rate of progress in later years as contrasted with that for the greater period.

Upon the whole, we learn from this analysis that *in relation to area* there has been a greater absolute progress during the last decade than in any previous corresponding period. This, however, does not apply in all cases to individual Colonies. The greatest absolute advance made in each Colony respectively, during any one decade since 1850, is shown as follows:—

GREATEST Positive Increase in one Decade.

	Decade.	Increase. No.	Increase. Per Square Mile, Persons.
Victoria	1850–60	461,685	5·25
New Zealand	1870–80	236,464	2·26

Western Australia	1880–90	19,607	0·02
ALL	1880–90	1,067,515	0·34

Relative to actual numbers, irrespective of area, the annual rates of increase during the last decade, and in the forty-one years ending 1891, are shown as follows, beginning with the highest—thus:—

TRUE Annual Rate of Increase.

Last Decade.	Per Cent.	Forty-one years ending 1891.	Per Cent.
1. Queensland	6·10	1. New Zealand	8·53
2. Western Australia	5·91	2. Victoria	6·86
3. New South Wales	4·07	3. All Colonies	5·54

7. New Zealand	2·39	7. Tasmania	1·90
8. South Australia	1·14	(Queensland first settled in 1859).	

That this rate of progress in relation to area is not merely confined to population is shown by the following comparison, the items selected indicating the special local advantages, whether natural or artificial:—

	Victoria, 1891.	New Zealand, 1891.	Tasmania, 1891.	N. S. Wales, 1891.	Queensland, 1891.	S. Australia, 1891.	W. Australia, 1891.
1. Relative size of each Colony	3½	4	1	12	25½	34	40
2. Population per 100 square miles No.	1305	603	572	368	61	35	5
3. Export of Domestic Products per square mile £	148·22	89·98	52·18	67·91	11·94	5·18	·74
4. Private Wealth per 10,000 ditto £	463	144	154	133	18	11	1
5. Railways, miles open and being constructed per 10,000 do No.	331	209	180	78	36	18	10
6. Acres in cultivation per 100 ditto No.	3058	840	1972	272	36	280	12

Relative progress can alone be measured by relation to area in countries where raw natural products form the principal objects of industry. This particularly applies to wool and other pastoral products when value of exports are considered, as comparatively little of the produce is consumed locally. Moreover, great preponderance of wool in the value of domestic products is an indication rather of a vast sparsely populated territory than of a high stage of development, and therefore to measure such products by population, which in such cases must be relatively small, would be utterly misleading, as it would artificially place the Colony at a disadvantage which supported the greatest number of persons per square mile. It scarcely requires an argument to demonstrate that the Colony which supports in comfort the greatest number of persons per square mile is in itself the best proof that that Colony has in the best sense attained the highest stage of development in a material point of view.

If these considerations be admitted, it follows that the Colonies in Australasia which at present have attained the highest stage of development stand in the following order, beginning with the highest :—

1. Victoria.
2. New Zealand.
3. Tasmania.
4. New South Wales.
5. Queensland.
6. South Australia.
7. Western Australia.

The diagram accompanying this Report more clearly depicts the facts supporting these conclusions.

Rate of Progress.

The rapidity with which the population of young English Colonies increases—for example,* doubling in the space of 11·70 years—is marvellous when contrasted with the most vigorous of old densely populated centres. During the period of 1840–90 the United Kingdom only increased by 11 millions, or ·70 per cent. per year. This rate, if continuous, would take 99 years to double the existing population, that is if other obstacles to growth did not arise.

The relatively more rapid progress of young countries is mainly due to the (1) large proportional influx of immigrants (relative to population) from older centres, and (2) to the favourable hygienic conditions of a thinly populated country, tending to prolong the average life, and to produce a much lower death-rate than is found common in unfavourably crowded centres of population.

The proportion of yearly increase due to these separate causes in the Australasian Colonies is contrasted with the average yearly increase in the United Kingdom ; thus :—

AVERAGE of 30 years ending 1890.

	Australasian Colonies.	United Kingdom.
Per cent. of increase per year due to natural causes, *i.e.*, excess of births over deaths	2·36	...
Percentage increase per year due to immigration.....	1·49	...
Total percentage increase from both causes	3·85	0·89
Time in which the respective rates, if continuous, would double the population.....	18·35	78·22

Thus, it appears that in Australasia the proportion of the yearly increase due to immigration alone is relatively much larger than the yearly increase in the United Kingdom from all causes.

Fallacies of Estimates based on current high Rate of Increase.

It is a common fallacy, however, to assume that the present relative rate of increase in Australasia will be maintained over a very long period of years ; for as population grows larger the immigration element will diminish proportionally, unless we assume, what is very improbable, that immigration will continue to increase at the same rate as the total population.

The death-rate, too, now so favourable, will gradually increase to the normal rate of European countries as the people approach a similar density of population ; for it is now too well established that a more or less high death-rate is always a concomitant of densely populated centres.

Progress of United States, 1790 to 1890.

These conclusions are borne out by statistics relating to the growth of population in the United States of America during the last 100 years. In 1790 the population of that country was

* Queensland's population increased from 226,968 in 1881 to 410,330 in 1891.

3,929,214, and increased to 62,000,000 persons at the close of 1890, representing a mean yearly rate of increase of 2·8 per cent., due to natural increase and to immigration. The following table shows the diminishing curve of rate of increase towards the close of this period :—

PROGRESS of United States, 1790 to 1890.

Year.	Population.	Mean Rate of Increase per year.
		Per cent.
1790	3,929,214	...
1800	5,308,483	3·05
1810	7,239,881	3·12
1820	9,633,822	2·90
1830	12,866,020	2·95
1840	17,069,453	2·85
1850	23,191,876	3·11
1860	31,443,321	3·10
1870	38,558,371	2·07
1880	50,155,783	2·73
1890	62,000,000	2·07
Mean rate per year for	the whole period	2·80

It is more probable, therefore, that the progress of population in Australasia during the next hundred years will follow the curve exhibited in the United States' progress between the years 1790 and 1890, rather than that the rate of the last 30 years will continue to be maintained for such a long period. If the latter were possible, it would produce a population of 165,770,000 persons in the year 1990 ; but if the former and more probable curve of progress be maintained, the population in the same year would only reach 60,000,000, *i.e.*, a population nearly equal to that of the United States at the present time.

These conclusions are further corroborated by the figures in the following table, which show, as might be expected, a rapid and gradual diminution in the abnormally high annual rates of increase which marked the earlier decades in Australasia, commencing with the year 1820 :—

PROGRESS of Population in Australasia, 1820 to 1890.

1890	3792	3·36	6·97	5·60

Special Causes affecting the future Progress of Australasia.

Perhaps, however, the higher stages of development in the United States in the coming century may specially favour the progress of the Australasian group.

An estimate based upon the experience of twenty-one great countries—embracing a population of 409 millions, possessing an area of 9492 million acres—demonstrates that the present civilisation requires the cultivation of 2·25 acres per head for food and raw products. International exchange disguises this fact as regards the experience of any one country. The present area of the United States is reckoned at about 2291 million acres. Allowing a need of the estimated requirement of cultivated land—viz. 2·25 acres per head—for supplying the whole round of wants of each person, and that three-fourths of her total area are capable of cultivation ; then if her population increases only at the rate of 2 per cent. per year, the population would be so vast (763·7 millions) that the produce of every available acre 126 years hence would be wholly required for *home consumption*.

The checks to population, however, may be expected to increase, and this limit may be placed further back ; but it is clear that the need to withdraw more and more her present enormous export of raw products from external markets will greatly operate in enhancing the value of the virgin soils of Australasia, and so give an additional spur to her development.

General Progress.

During the last Forty-one years Population, Public Revenue, Private Wealth, Land Cultivation, External Trade, and other matters have made wonderful progress.

Thus, since 1850—

Population has increased by 3,466,225.
Revenue per annum has increased by £29,271,000.
External Trade per annum has increased to £136,500,000.
Capital invested in Railways has increased to £115,645,000.
Wool Exports per annum have increased by £26,154,000.
Sheep have increased by 108,086,000.

Since 1860—

Public Debt has increased by £194,210,000.
Private Wealth has increased by £922,000,000.
Private Wealth, less Public Debt, has increased by £806,355,000.

The annual rates of increase in the growth of Population, Public Revenue, and Public Debt during the last decade have been as follows :—

Population	3·26 per cent.
Revenue	3·90 „
Public Debt	7·31 „

Public Debt and Railways.

A great deal of misconception exists at the present time in regard to the higher ratio of increase in the Public Debt of Australasia during the last decade, as compared with her Population and Revenue ratios, and it is evident that this misconception has arisen from a failure on the part of English financiers to realise that Australasian debt, or at least 90 per cent. of it, is represented by *Capital Investments* in Railways, Bridges, Road, Harbours, &c. In no country in the world can it be shown that such necessary investments—whether undertaken by General or Local Governments or by private Corporations—have been made according to the ratios of increase in either Population or Revenue during the same period. Nor when we examine the subject further can we discover any reason, in the earlier stages of railway development, why there should be the slightest correspondence between them. The higher ratios of railway development in the early stages are determined rather by the relative smallness of the accidental starting-point with which comparison is made, and affords no test whatever of the actual capital invested, nor of its lack or sufficiency, so far as the immediate welfare of the community is concerned. The truth of these observations is significantly made manifest by reference to the progress of railway investments in the United Kingdom and Germany at two different periods; the one marking the absolute and relative increases at the earlier stages of their railway development, the other at a later period (the last decade) when the network of their railway systems may be supposed to have somewhat approached completion. The periods taken for this purpose are the decades ending 1850 and 1890 respectively ; thus :—

		Increase since close of previous Decade.

Nothing could be more conclusive in demonstrating the fallacies underlying all conclusions which are based upon any supposed correspondence between the ratios of increase in Population, Revenue, and Railway Investments, than the illustrations given above. Thus, *e.g.*, the railway investments in Germany in the decade ending 1850—though actually £9,000,000 under the amount invested during the decade ending 1890—have a ratio of increase of 916·7 per cent. as compared

with the previous decade; while the corresponding ratio of the larger amount invested in the decade ending 1890 represents only 14·9 per cent. increase; and while Railway Investments in the earlier decade represent a ratio of increase of 916·7 per cent., the Population and Revenue ratios are 9·5 and 31·2 respectively. The absolutely larger Railway Investments of decade 1880–90 only represent a ratio of 14·9 per cent. increase, while the Population and Revenue ratios for the same period are 9·3 and 50·7 per cent. respectively. The figures for the same period in respect of the United Kingdom are equally conclusive in showing the fallacies of judgments formed in this way. As the greater part of the objections to further borrowing in connection with Australasian railway development are based upon upon such fallacies, it may be of advantage to study the progress of Railway Investments in various countries at various periods since the year 1840, as in the following table :—

The foregoing table clearly demonstrates that of necessity the ratio of increase in respect of Railway Investments in all countries greatly exceeds the ratios of increase of either Population or Revenue, and therefore the rate of borrowing in Australasia for such purposes cannot be measured by any such references. The lack of correspondence between such ratios at different stages in various countries are summarised as follows :—

It is curious to observe, that of all the illustrations given the United Kingdom shows the highest ratio of Railway increase as contrasted with her Population and Revenue ratios.

When we consider all these matters, the mistaken advice given in a recent press telegram from London cannot be too strongly deprecated. This telegram advises as follows :—

"In financial circles the hope is generally expressed that the Colonies would make definite efforts to defer their borrowing intentions. Financiers advise the creation of Sinking Funds for the

purpose of discharging matured loans." A very able comment on the mistaken nature of this advice has recently been published by the Commissioners of Audit for South Australia, from which the following extract is taken :—

"It must be borne in mind, that not only in this Colony (South Australia), but throughout Australia, the greater part of the Public Loans are for the construction of Railways, and the Local Government practically takes the position of the shareholders. The railway capital in the United Kingdom at the end of 1890 consisted of :—

	£
Ordinary Share Capital	332,070,153
Preference ditto	332,889,003
Loans	232,512,870
	£897,472,026

And this was increasing at the rate of about £16,000,000 per annum. Now what would be thought of any financiers, who not only tried to put the brake upon this increased expenditure, but suggested the necessity of repaying the Loans and Preference Stock ? And yet this telegram in its application to Australia goes even further than this, for it would not only stop the expenditure of new capital for development, but in its advice about the creation of Sinking Funds practically ignores the permanent value of the railways already constructed. Such a policy would limit the further development of a continent almost as large as Europe to the resources of the three million colonists already settled there, instead of affording a field for the permanent, profitable, and secure investment of capital. If the British railways require annually so large an addition to their capital (a considerable proportion of which additions are in the form of loans), surely there are stronger reasons why the development of this continent should require a constant increase in capital. The rapid growth in population, production, trade, and commerce, and the extension of settlement, demand that the public works and facilities should keep pace with this growth. Australia must continue to pursue her onward course, and to do so additional capital can be employed with safety both to the borrower and lender. To stop progress at the present point would be folly." The same able authorities go on to say that—"The only justification for the suggestions in the telegram would be that the loan moneys are injudiciously expended, and that the securities are insufficient, or that the revenues will not pay interest." And in answer to this they state that—"The manner in which the public funds have been hitherto protected, and the capital and resources of the Colony increased, should be a guarantee that the residents will not permit their personal interests to be jeopardised by extravagance or unnecessary liabilities ;" and "that the people have a sufficient stake in permanent value of securities and the future welfare of the Colony to lead them to look on both sides of the obligation."

Comparative Growth of the Ex-Australasian and Intercolonial Trade of Australasia since 1876.

During the last fifteen years the total import trade of the seven Colonies has increased by £28,133,000, or 64·18 per cent.—equal to an annual rate of 3·37 per cent.

Its export trade shows a higher increase in the same time, viz., £33,440,000, or 85·20 per cent.—equal to an annual rate of 4·21 per cent. If we divide the period into quinquenniads, however, we find, from the following abstract of a more extended table given hereafter, that the growth has fluctuated in a remarkable manner—the mean increase in total external trade of the quinquennium 1882–1886 being as high as 25·53 per cent., while in the last quinquennium the mean increase had diminished to 11·60 per cent. The decreased rate in the last quinquennium as shown by Customs' returns is almost wholly connected with imports ; and attempts have been made to show that the diminution in the rate of increase is wholly due to the greater stimulation given to imports during the quinquennium 1882–1886, as compared with the quinquennium 1887–1891, caused by alleged greater loans expenditure in the former period. This explanation, however, is altogether unsatisfactory, for the loans expenditure in the last quinquennium is, on the average, almost equal (only £244 per year less) to that of the previous one. It is probable that the apparent decrease in the rate of increase is more largely due to the fall in prices combined with shrinkage due to the general depression in the world's trade during the last two or three years. This conclusion seems all the more reasonable when we perceive that the shrinkage during the last quinquennium is far more marked in the external trade of the United Kingdom and in that of Canada.

Thus, although the increase of the ex-Australasian trade of the seven Colonies in the second quinquennium over the first amounted to 23·76 per cent., and fell to 3·74 per cent. in the third relative to the second quinquennium, still it is obvious that the cause of this shrinkage is not a local matter, when we find that in the total external trade of the United Kingdom and Canada a similar effect was produced. In the United Kingdom the increase of 8·49 per cent. of the second quinquennium fell to a positive decrease of 0·98 per cent. in the third ; and in Canada the increase of 22·25 per cent. in the second quinquennium fell to a positive decrease of 4·73 per cent. in the third.

Excess of Imports over Exports.

The only factor which is a fairly constant one in the trade of all countries is that the Customs values of imports exceeds the exports. That this is mainly due to different estimates of the same goods at ports of clearance and ports of entry is obvious from the following figures relating to the same goods covering a period of 16 years as valued in the Customs' returns at ports of entry and clearance in the United Kingdom and seven colonies of Australasia respectively.

AUSTRALASIAN Trade with the United Kingdom.—Aggregate of last 16 Years (1876-1891), showing the different Values placed upon the same Trade at Ports of Arrival and Departure.

(000's omitted.)

Excess of II. over I.	33,207	—	—	—	—	—
Ditto per cent.	8·18	—	—	—	—	—

It is somewhat remarkable that at the Ports of Entry of both countries respectively the same goods should exceed the values of Ports of Clearance by nearly the same proportion, viz. 12·11 and 12·76 per cent. The only significant point of difference between the two countries is that the aggregate excess of Imports over Exports for the sixteen years in the United Kingdom amounts to £66,679,000, or 16·86 per cent., while the corresponding excess in the seven Colonies is only half as much, being £33,207,000, or 8·18 per cent. Although the rough arbitrary and variable way in which exporters declare the values of goods exported† in all countries makes it impossible to base reliable deductions upon apparent differences in the absolute values of the exports and imports of any country, it is curious that the greater relative excess of imports in the United Kingdom should amount to £2,092,000 per year, seeing that for the last ten years the element of loans construction in Australasian imports in excess of the element of interest on public loans in exports, amounting on the average to about £3,850,000 per year during the last decade, should have favoured a *greater* relative excess of imports in Australasian Colonies.

These instances of anomalies, however, are valuable in showing to us the danger of relying upon the apparent differences of value between the exports and imports of any period or country for the purpose of receiving therefrom any guidance to the relative wealth, balance of trade, or indebtedness of the particular period or country. The tendencies of imports of the current period as compared with imports of former periods, as regards any one country, no doubt are relatively, if not absolutely, true; and so, in a less perfect way, may we rely upon the comparison of exports of different periods in the same country. But the differences between imports and exports in the same country, or the volume per head of *external trade* of different countries, are worse than useless when used as a base to determine either the total merchandise, local wealth, indebtedness, or balance of trade. Only those who are enslaved by one single idea at a time could contentedly rest upon deductions so based.

As regards the volume of trade, it is frequently overlooked that the proportion of the total trade of a country, represented by its external or foreign trade, varies with each country in accordance with the sufficiency or lack of sufficiency of local resources for the supply of local requirements. A large *foreign trade*, due mainly to deficiencies of local resources, combined with differences in the nature of the prevailing industry, is therefore the worst possible index of the comparative value of either the total trade or wealth of a country. Broadly speaking, the volume of the foreign trade of a country largely depends upon the area of local interchange, being at a maximum with a very small area and a dense industrial population, as in the United Kingdom, and tending to zero as the area of interchange is enlarged, as in the United States of America, or as in the aggregate of the World's trade.

This is the true explanation why the total external trade of the United States only amounts to about 50·20 per cent. of the United Kingdom; while its consumption of food and beverages alone, mainly derived from local sources, is 66·59 per cent. greater. Thus, too, the enlargement of the Australasian area of local interchange by federation would reduce its foreign or external trade by about 40 per cent., although its total trade would remain unaffected.

* Includes a small amount of trade relating to Fiji.

† Rarely subject to revision by Customs officials, as in the case of the dutiable goods imported.

* The defined expenditure from Loans in New Zealand does not include items prior to year 1870 expended under Provincial Governments, and only includes the bulk of Loans expenditure since that period. A reference to the Total Public Debt, £38,844,914, indicates that a sum of £10,889,018 is not included in the specified statement.

* NOTE.—As the Loans actually expended on Railways on 31st December, 1891, include a considerable amount for Lines not open for traffic, the percentage proportion to capital will be somewhat less than what it would be if reckoned in relation to *Capital expended on Lines open for traffic* only. The net burden on General Revenue, however, is more correctly indicated by the method adopted.
